

## Special Issue

# Ionic Liquid for Separations

### Message from the Guest Editor

The application of ionic liquids (ILs) has blossomed in the last few decades due to their unique properties, including immeasurably low vapor pressure, high thermal stability and excellent solvation ability for a wide range of compounds. Consequently, ILs are considered attractive replacements for volatile organic solvents in multiple applications, including separation and purification, catalysis or extraction processes, among others. In addition, their physical and chemical properties can be fine-tuned by an adequate selection of the cation and anion constituents, for that reason ILs has been described as design solvents (i.e., “task-specific” ILs). In line with the increasing attention that this family of compounds has attracted recently, the present Special Issue reports on the most important and latest fundamental and technological advances in separation processes using ILs.

## About the Journal

### Message from the Editor-in-Chief

*Separations* offers the scientific community a high-quality, open-access journal option with rapid time-to-publication without any sacrifice of a rigorous peer-review process. We invite contributions ranging from fundamental characterization and instrumentation development through application of techniques to shed light on a broad spectrum of separation science needs. Since inception, *Separations*, has become unique in its combination of rapid publication and thorough scientific content. We invite you to consider us for your next contribution.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, and other databases.

#### Journal Rank:

CiteScore - Q2 (Analytical Chemistry)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the second half of 2025).
