Special Issue

Brain Correlates of Human Sexual Behavior: New Insight on Models, Theories, and Experimental Research

Message from the Guest Editors

During recent years, several scientific attempts have been made to decompose the processes and identify the brain regions involved in normal and pathological sexual behavior. It is now twenty years since the pioneering studies published by Stolery described the cerebral basis of human sexual arousal. Afterward, additional brain imaging studies have shown a wider set of brain regions involved in different aspects of sexual stimuli processing in healthy participants and described the alterations of functional connectivity in sexual dysfunctions. This progress has been made possible by the methodological advances in the field of brain imaging and psychophysiological techniques, including the extensive use of EEG recordings. Despite these advances, even nowadays, the brain correlates of sexual behavior and its perturbations are poorly understood, representing both methodological and theoretical challenges for modern neuroscience. This Special Issue is thus dedicated to the sexual brain, with a special emphasis on neuroimaging and psychophysiological studies that attempt to untangle the complex role played by the human brain in functional and dysfunctional/altered sexual behavior.

Guest Editors

Dr. Nicoletta Cera

Faculty of Psychology and Education Sciences, University of Porto, 4200-135 Porto, Portugal

Dr. Carlotta Cogoni

Instituto de Biofísica e Engenharia Biomédica, Faculdade de Ciências da Universidade de Lisboa, Campo Grande 016, 1749-016 Lisboa, Portugal

Deadline for manuscript submissions

closed (30 November 2024)

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. David L. Rowland

Department of Psychology, Valparaiso University, Valparaiso, IN 46383, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within ESCI (Web of Science), EBSCO, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 36.3 days after submission; acceptance to publication is undertaken in 3.9 days (median values for papers published in this journal in the first half of 2025).
