

Special Issue

Bioimpedance and Signal Processing

Message from the Guest Editor

Research in bioimpedance sensing and measurement, in combination with developments in the synthesis and analysis of measurement signals, has enabled the development of effective devices for the prediction, diagnosis, and monitoring of diseases. We pay particular attention to wearable sensors and devices that run on limited computing resources with low energy reserve. The last matter sets specific requirements for signal processing—fast calculations at low complexity and low energy consumption. Another feature is that we measure and analyze time-varying impedances as of breathing lungs, pumping heart, and pulsating blood, as well as fast-moving pathogens in high-throughput microfluidic devices. That is, concurrent time- and frequency-domain analysis is required. The third and perennial problem is the suppression of noise and elimination of artefacts. In this Special Issue we invite research papers presenting novel methodologies, algorithms, and mathematical approaches for the generation, acquisition, and processing of bioimpedance signals.

About the Journal

Message from the Editor-in-Chief

Our primary goal is to encourage scientists and engineers to publish their theoretical results and developed methods in as much detail as possible. There is no limit to the maximum length of papers. Whenever possible, authors are encouraged to provide relevant data and developed code so that the results can be reproduced. Our goal is to provide a platform for scientists and engineers to share new approaches to signal processing in various application domains.

Editor-in-Chief

Prof. Dr. Santiago Marco

1. Department of Electronics and Biomedical Engineering, University of Barcelona, Martí I Franqués 1, 08028 Barcelona, Spain
2. Signal and Information Processing in Sensor Systems, Institute for Bioengineering of Catalonia, The Barcelona Institute of Science and Technology, Baldiri Rexac 10-12, 08028 Barcelona, Spain

Author Benefits

High Visibility:

indexed within Scopus, ESCI (Web of Science), Inspec, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 22.9 days after submission; acceptance to publication is undertaken in 7.6 days (median values for papers published in this journal in the first half of 2025).

Journal Rank:

JCR - Q2 (Engineering, Electrical and Electronic) /
CiteScore - Q2 (Engineering (miscellaneous))
