

Special Issue

The Asthma, Rhinitis and Chronic Pulmonary Diseases

Message from the Guest Editor

With the aim of more closely understanding these respiratory diseases, we are pleased to announce a Special Issue of Sinusitis entitled “Asthma, Rhinitis, and Chronic Pulmonary Diseases”. The term chronic pulmonary diseases (CPDs) refers to respiratory complications such as asthma, chronic obstructive pulmonary disease (COPD), acute lung injury, infections (such as influenza and pneumonia), and many other breathing problems. In this Special Issue, we invite preclinical studies discussing inflammatory and structural changes of the airways associated with CPDs. Thus, this journal provides a platform to discuss the molecular and cellular factors responsible for developing CPDs to find new ways to prevent or, if possible, cure these diseases. We welcome both original research and review articles. We also encourage authors to consider their negative findings, if any, for publication. Accepted manuscripts will be available on our open-access platform, which will be easily accessible by our readers.

About the Journal

Message from the Editor-in-Chief

Sinusitis is an international, peer-reviewed, open access journal, which supports the whole field of sinusitis and its related areas, with the aim to bridge the gap between medical research and clinical practice about sinusitis. The journal is published in open access format—research articles, reviews and other contents are released on the Internet immediately after acceptance, thus allowing the scientific community and the public to have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

Editor-in-Chief
