Message from the Guest Editors

Dear Colleagues,

Innovations in information and communication technologies have made cities smarter at being able to run their systems more efficiently and effectively, connecting them with their residents and communities. The word “smart” is interchangeable with virtual, intelligent, digital, or ubiquitous, to connect a wide range of city- and citizen-related issues based on data-driven technologies.

This Special Issue is devoted to analytical, descriptive, and explanatory research that broadens the courses of action and practice for the development of smart cities, and that closes the gap in the literature about smart cities spanning across multidisciplinary areas. This Special Issue focuses on policy initiatives, case studies, empirical evidence, and novel insights to promote data-driven innovations for building smart cities in a national, comparative, or international context.

Message from the Editor-in-Chief

Smart Cities provides an advanced forum for the dissemination of information on the science and technology of smart cities. It publishes reviews, regular research papers (articles) and communications in all areas of research concerning smart cities. Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the length of the papers so that the full experimental results can be reproduced. Manuscripts regarding research proposals and research ideas are particularly welcome.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [ESCI \(Web of Science\)](#), [Inspec](#), [AGRIS](#), and [other databases](#).

Journal Rank: CiteScore - Q1 (*Urban Studies*)
