IoT-Based Intelligent Traffic System

Guest Editors:

Prof. Dr. Ka Lok Man

School of Advanced Technology, Xi'an Jiaotong Liverpool University, Suzhou 215123, China

Dr. Kamran Siddique

Department of Computer Science and Engineering, University of Alaska Anchorage, Anchorage, AK 99508, USA

Dr. Vijayakumar Nanjappan

Center for Ubiquitous Computing, Faculty of Information Technology and Electrical Engineering - ITEE, University of Oulu, P.O.Box 4500, FIN-90014, Finland

Deadline for manuscript submissions:

closed (1 September 2021)

Message from the Guest Editors

Dear Colleagues,

With the continual development of Internet of Things, all kinds of smart systems are quickly evolving to make our day-to-day life smoother and safer. Intelligent traffic system is one of the fastest-growing fields within the smart systems. The main functionalities of intelligent traffic system are as follows: (1) monitoring real-time traffic conditions in specific areas, (2) locating traffic emergencies (i.e., traffic accidents) in specific areas, and (3) dynamic monitoring and managing the continuous use/data in public transit services (i.e., car lane changes) that may lead to changes in macro traffic conditions. This Special Issue will focus on the abovementioned functionalities of intelligent traffic systems as underlying stimulative scenarios toward the design and implementation of smart transportation systems based on Internet of Things and/or blockchain-both of which share inherent distributed technology characteristics—combining both Internet of Things sensor nodes and distributed ledger technology.

Message from the Editor-in-Chief

Smart Cities provides an advanced forum for the dissemination of information on the science and technology of smart cities. It publishes reviews, regular research papers (articles) and communications in all areas of research concerning smart cities. Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the length of the papers so that the full experimental results can be reproduced. Manuscripts regarding research proposals and research ideas are particularly welcome.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, ESCI (Web of Science), Inspec, AGRIS, and other databases.

Journal Rank: JCR - Q1 (Engineering, Electrical and Electronic) / CiteScore - Q1 (Urban Studies)
