

## Special Issue

# Interventions and Treatments for Chronic Rhinosinusitis

### Message from the Guest Editors

Chronic rhinosinusitis is a debilitating condition affecting 10–15% of the worldwide population. Whilst standard medical care, surgery, and adjuvant therapies improve clinical symptoms to some extent, a plethora of innovative interventions are under investigation. This Special Issue will focus on advances into the management of the disease, including advanced sinus surgery procedures and recent research concerning new treatments and interventions with the potential to improve clinical outcomes long-term.

## About the Journal

### Message from the Editor-in-Chief

---

#### Author Benefits

##### Open Access:

free for readers, free publication for well-prepared manuscripts submitted in 2018.

##### Rapid publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16 days after submission; acceptance to publication is undertaken in 6 days (median values for papers published in the first six months of 2018).

##### Recognition of Reviewers:

reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal, in appreciation of the work done.
