Multirisk Analysis for a Healthy City

Message from the Guest Editor

Cities are places of organization of collective interests, evolving quickly as they depend on social, cultural, and technological changes. By developing public policies and creating physical and social environments that enable citizens to mutually support each other in carrying out all functions of life and achieving their full potential, cities can become Healthy Cities (World Health Organization). Multirisk analysis, urban and territorial plans, land use pattern, mobility system, greenspace design, people awareness, and social perception of risks are some of the key elements to develop advance planning in order to reduce any kind of urban risks and to better support and enhance city health. Authors are invited to contribute to this Special Issue by submitting theoretical and empirical studies and policy-related and practice-related contributions addressing any of the above topics.

About the Journal

Message from the Editor-in-Chief

Societies (ISSN 2075-4698) is an interdisciplinary journal that brings together different scientific approaches to engage with societal questions to enhance our understanding of the social realm throughout history. The journal publishes original empirical research papers, literature reviews, and conceptual papers. Our aim is to publish papers that have a significant impact on addressing present and emerging societal questions. Therefore, we encourage researchers to publish their results in as much detail as possible. For empirical research papers and literature reviews, all experimental details must be provided, so that the results are reproducible. We also encourage the publication of timely theoretical pieces on topics of interest to existing and emerging societal questions. Papers are either published in the open journal or in Special Issues devoted to specific topics of interest to the field.

Editor-in-Chief

Prof. Dr. Gregor Wolbring

Community Rehabilitation and Disability Studies, Cumming School of
Medicine, University of Calgary, Calgary, AB T2N 4N1, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, ESCI (Web of Science), RePEc, EconBiz, and other databases.

Journal Rank:

JCR - Q2 (Sociology) / CiteScore - Q2 (General Social Sciences)
