Special Issue

Soil Fertility Evaluation and Precision Fertilization

Message from the Guest Editors

Ensuring sustainable agriculture requires efficient nutrient management strategies to promote adequate levels of nutrients in soils towards balanced plant nutrition for high yields of crops. This Special Issue on "Soil Fertility Evaluation and Precision Fertilization" aims to explore cutting-edge research on soil fertility management strategies that support soil health and sustainable agricultural systems. We welcome studies addressing novel fertilization techniques, precision nutrient application, soil amendments, and decision-support tools that contribute to better nutrient management and improved crop productivity. We particularly encourage contributions that investigate innovative fertilizer technologies, soil fertility monitoring, and the development of sustainable fertilization models that promote environmental protection while ensuring high crop yields. Studies that integrate precision agriculture tools, remote sensing, and data-driven approaches to enhance plant nutrition and optimize resource use are also of great interest. We invite researchers to submit their latest findings and contribute to shaping the future of precision fertilization.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Heike Knicker
Group of Interactions Between Soils, Plants and Microorganisms, Departament of Food Biotechnology, Instituto de la Grasa (IG-CSIC), 41012 Sevilla, Spain

Author Benefits

High Visibility:

indexed within Scopus, ESCI (Web of Science), AGRIS, PubAg, GeoRef, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Soil Science) / CiteScore - Q1 (Earth-Surface Processes)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 31.6 days after submission; acceptance to publication is undertaken in 4.6 days (median values for papers published in this journal in the first half of 2025).
