Software Quality Metrics and Measurement

Message from the Guest Editors

The software industry is steadily moving towards the adoption of the software-as-a-service model. A factor that is gaining increasing attention is the quality of the software, not solely measured in terms of availability, functionality or security but in numerous other facets such as user experience, suitability, appropriateness and completeness, among others. Designing quality software in critical domains such as e-business is one battle that needs to be won in this war. Tools such as formal standards are key weapons in the formalization of quality evaluation and metrics are spearheading their practical application. Metrics (and the appropriate measurement methods) reflect the quality of both the services and data of a software system. They can be measured at different stages of the software lifecycle and from different aspects. Assigning values to metrics and interpreting the results is a critical point for moving the software to the next stage of the lifecycle or for getting feedback that will guide corrections, upgrades or maintenance.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Peter Glavič

Department of Chemical Engineering, University of Maribor, 2000
Maribor, Slovenia

Author Benefits

Open Access:

free for readers to download, share, and reuse content.
Authors receive recognition for their contribution when the
paper is reused.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 30.6 days after
submission; acceptance to publication is undertaken in 4.5
days (median values for papers published in this journal in
the second half of 2024).

Recognition of Reviewers:

APC discount vouchers, optional signed peer review, and
reviewer names published annually in the journal.
