# Special Issue

# Bayes and Empirical Bayes Inference

### Message from the Guest Editor

I am pleased to announce a Special Issue on "Bayes and Empirical Bayes Inference". The Bayesian method is an effective estimation method, which is suitable for both parametric and nonparametric models. Because of the combination of prior information, estimation results of the Bayesian method are more accurate. Empirical Bayes modeling permits statisticians to incorporate additional information into problems by viewing the parameters as a second stochastic process with an unknown but restricted class of distribution. Bayes and empirical Bayes inference have a broad range of applications in practical fields. This Special Issue will present a collection of the latest developments in Bayes and empirical Bayes inference and their applications to practical problems. I look forward to receiving your submissions.

### Guest Editor

Prof. Dr. Wenhao Gui

Department of Data Science, School of Mathematics and Statistics, Beijing Jiaotong University, Beijing 100044, China

### Deadline for manuscript submissions

closed (31 March 2024)

MDPI

# About the Journal

## Message from the Editor-in-Chief

### Editor-in-Chief

Prof. Dr. Wei Zhu
Department of Applied Mathematics and Statistics, State University of New York at Stony Brook, Stony Brook, NY 11794, USA

### Author Benefits

**High Visibility:**
indexed within ESCI (Web of Science), Scopus, RePEc, and other databases.

**Rapid Publication:**
manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.2 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2025).

**Recognition of Reviewers:**
reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal, in appreciation of the work done.
