

Special Issue

Compositional Data Analysis in the Data Science Era

Message from the Guest Editors

Compositional data, namely data where the relevant information is contained in the ratios between their components or parts, and in general constrained data sets, are ubiquitous in the above-mentioned fields. Subsequently, the need for statistical and computational methods, as well as machine learning algorithms, that consider the special nature of compositional data has increased. This Special Issue aims to provide an overview of ongoing research in compositional data analysis. The novelty of contributions may lie in either the methodologies employed or the unique and innovative application of such methodologies to this kind of data that provides new and significant empirical insights. Topics of interest include regression, time series, classification, and variable selection algorithms for long and/or wide-formatted compositional data.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Wei Zhu

Department of Applied Mathematics and Statistics, State University of
New York at Stony Brook, Stony Brook, NY 11794, USA

Author Benefits

High Visibility:

indexed within ESCI (Web of Science), Scopus, RePEc, and
other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 18.2 days after
submission; acceptance to publication is undertaken in 2.9
days (median values for papers published in this journal in
the first half of 2025).

Recognition of Reviewers:

reviewers who provide timely, thorough peer-review
reports receive vouchers entitling them to a discount on
the APC of their next publication in any MDPI journal, in
appreciation of the work done.
