Dr. Laszlo Bejo

Dr. K. M. Faridul Hasan

Deadline for manuscript submissions: closed (21 November 2023) Wood and wood-based products are considered the most significant renewable source of lignocellulosic material abundantly available in Nature. However, natural fibers are also defibrated from wood particles and can be used for green insulation and plastic composite material production. The particles obtained from softwoods and hardwoods are another important source of lignocellulosic materials used for sustainable particle board manufacturing. Different thermosetting, thermoplastic, and cementitious polymers are used for the production of and the development wood-based products and manufacturing of composites. Recently, multiple hardwoods, barks, and leaves have been used for metallic nanoparticle synthesis. Furthermore, a variety of waste woods and industrial byproducts are excellent sources of sustainable lignocellulosic raw materials. In some cases, nanoparticles are also used improve the to thermomechanical and physical properties of the developed products. However, there is still a long way to go for sustainable lignocellulosic products to replace traditional nonbiodegradable products, due to the lack of efficient technology and production protocols.

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international Open Access journal which provides an advanced forum for research findings in areas sustainability related to and sustainable development. Sustainability publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

## **Author Benefits**

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions. **High Visibility:** indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (*Geography, Planning and Development*)
