Message from the Guest Editors

The current climate crisis and increase in urban populations pose several environmental, social, and economic challenges to advancing city management. Urban developments are now directed towards green buildings (that utilize innovative materials, architectural designs, and electromechanical systems to minimize emissions) and smart cities (where digital technology is integrated into monitoring and controlling all city functions).

This Special Issue aims to tackle modern urbanization and environmental challenges through promoting innovations and creative ideas in sustainable, environmentally friendly, and energy-efficient smart cities. Original research articles and reviews are welcome.
