Message from the Guest Editors

Plant crop diseases have devastating consequences for agriculture, causing losses of up to 30% in some cases. Sustainability is at the heart of all efforts to improve plant health: fighting pests and diseases and increasing crop yields must be achieved without putting further pressure on the environment through the inappropriate use of chemicals. By avoiding the use of hazardous chemicals to combat pests and diseases, not only the environment is protected, but also pollinators, natural enemies of pests, beneficial organisms, and the people and animals that depend on the plants.

This special issue will focus on Sustainable Crop Plants Protection: the timely detection, characterization and identification of diseases and pests for a correct phytosanitary diagnosis, application of phytosanitary and regulatory measures that support sustainable and integrated management and/or control of diseases and pests.

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE](#) and [SSCI \(Web of Science\)](#), [GEOBASE](#), [GeoRef](#), [Inspec](#), [RePEc](#), [CAPlus / SciFinder](#), and [other databases](#).

Journal Rank: JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
