Message from the Guest Editor

Although a great deal has been achieved in Sustainable land management (SLM) globally, much more will have to be done at the technical, social, institutional, political and economic levels to ensure SLM for all renewable natural resources on all land use types around the world.

- What have we achieved in SLM compared to the ever-growing challenges of soil, water and biological degradation of land systems?
- Do we sufficiently understand the socio-economics of land degradation to convince governments so that they provide the necessary schemes and incentives for land users to manage their land wisely?
- Have institutional settings been adequately accustomed to invite land users to recognize and maintain essential ecosystem functions on their land?
- Are political systems in the different development contexts conducive to sustainable land management and tuned to put an end to land degradation?

What we need here is a synopsis of current research in degradation and sustainable land management, including an analysis of major research gaps which remain as open fields for future research.
Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer-reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High visibility:** indexed by the Science Citation Index Expanded and Social Sciences Citation Index (Web of Science), as well as Scopus and other databases.

**Rapid publication:** manuscripts are peer-reviewed and a first decision provided to authors approximately 16.1 days after submission; acceptance to publication is undertaken in 4.9 days (median values for papers published in this journal in the second half of 2018).
