Message from the Guest Editors

Dear Colleagues,

The main aim of this Special Issue is to collect outstanding research articles highlighting original development and/or applications of Computational Fluid Dynamics (CFD) in the area of offshore renewable energy (ORE), covering a wide range of problems. Topics of interest include but are not limited to the development and/or application of CFD in:

- ORE resource assessment, wind farm, and tidal array layout design;
- Turbine/wake interaction in wind farms and tidal arrays;
- Wave- and turbulence-induced loads in tidal energy converters;
- Floating and fixed-bottom wind turbine analysis and design;
- Active and passive rotor flow control;
- Wave energy;
- Fluid/structure interaction;
- Hybrid methods combining CFD and machine learning;
- Combined use of CFD and experiments in any of the above topics.

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE](#) and [SSCI \(Web of Science\)](#), [GEOBASE](#), [GeoRef](#), [Inspec](#), [RePEc](#), [CAPlus / SciFinder](#), and [other databases](#).

Journal Rank: JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
