Deadline for manuscript submissions:

closed (30 June 2021)

Message from the Guest Editors

Dear Colleagues,

Buildings of the future will be an active and integrated part of the energy system by reducing energy demands and providing flexibility services vital to successful decarbonisation of the energy system. In order for this vision to prove true, rethinking the building, both as a building project and as part of the energy system, will be required.

This Special Issue is especially focused on empirical studies and demonstration case studies on how the energy flexibility of a building or community can be activated, controlled, and utilized to enhance end-user experience, improve energy efficiency, and solve operational bottlenecks in energy infrastructure. This Special Issue could also include work on new methods and tools that facilitate the design and operation of next-generation energy flexible buildings and/or communities.

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE](#) and [SSCI \(Web of Science\)](#), [GEOBASE](#), [GeoRef](#), [Inspec](#), [RePEc](#), [CAPlus / SciFinder](#), and [other databases](#).

Journal Rank: JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
