# Hydrological Responses by Climate Change and Human Activities

Guest Editors:

#### Dr. Sang Ug Kim

Department of Civil Engineering, Kangwon National University, Chuncheon, Korea

#### Prof. Dr. Minwoo Son

Department of Civil Engineering, Chungnam National University, Daejeon, Korea

Deadline for manuscript submissions: closed (31 March 2021)

#### **Message from the Guest Editors**

Hydrological responses are being impacted by both climate change and human activities. Climate change and human activities have accelerated significantly during the last three decades. Variation of runoff in a water circulation system has a decisive effect on its components. In particular, gradual or abrupt changes in a water cycle can significantly impact various subsystems, such as ecological systems in a basin. Hydrological responses are affected by climate change and human activities such as construction of dams, land use change, and water intake. Therefore, identifying the change in hydrological responses caused by climate change and human activities is crucial to the establishment of a reasonable water resources planning and management strategy in a specific watershed.

This Special Issue aims to publish high-quality articles on the variation in runoff due to the two types of factors, climate change, and human activities. Additionally, hydroinfomatics to observe and analyze meteorological and hydrological data and performance of rainfall-runoff models could be included in this Special Issue.

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. Sustainability publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

## **Author Benefits**

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
