Message from the Guest Editor

At present, global energy demand is increasing at an unsustainable rate, with an estimated rise by 48% between 2012 and 2040. Global energy-related CO₂ emissions are expected to increase by 46% within the same time interval. Therefore, the development of clean energy technologies able to alleviate the skyrocketing energy demand and mitigate the rising CO₂ emissions is urgently required. Membrane materials and processes now play a crucial role, among others, for the design and development of novel electrochemical technologies for energy conversion and storage systems. In particular, ion exchange membrane materials have been used as a key component to construct highly efficient and economically affordable energy technologies. This Special Issue will therefore aim at a systematic analysis of the existing and new ion-exchange membranes and processes, opportunities, and challenges for developing advanced electrochemical energy conversion and storage technologies including reverse electrodialysis, water electrolysis and flow batteries, and related processes. Papers related to the aforementioned electrochemical energy systems towards establishing a sustainable society are welcome.

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE](#) and [SSCI \(Web of Science\)](#), [GEOBASE](#), [GeoRef](#), [Inspec](#), [AGRIS](#), [RePEc](#), [CAPlus / SciFinder](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (*Geography, Planning and Development*)
