Message from the Guest Editor

Dear Colleagues,

Nanobiotechnology is the study of microscopic particles and plays a significant role in animal production, environmental sustainability, disease control and food security. Nanobiotechnology provides scientific advantages for improving animal health and welfare through its high specificity, bioavailability and degradability. All these factors have a significant impact on production and on the restoration of economic losses in livestock species. This Special Issue focuses on novel research concerning the use of nanobiotechnology in animal production, health and welfare as natural supplements using animal models.

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer-reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access:— free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High visibility: indexed within [Scopus](#), [SCIE](#) and [SSCI \(Web of Science\)](#), [GEOBASE](#), [Inspec](#), [AGRIS](#), [RePEc](#), [CAPlus / SciFinder](#), and many [other databases](#).

Journal Rank: [JCR](#) - Q2 (*Environmental Sciences*) / [CiteScore](#) - Q1 (*Geography, Planning and Development*)
