Message from the Guest Editors

The role of soil functions for achieving Sustainable Development Goals such as food security (SDG 2), energy security (SDG 7), soil carbon sequestration (SDG 13) and maintaining ecosystem services (SDG 15) is crucial. The key for sustainable soil management is to stimulate soil processes that minimize antagonistic effects between soil functions and optimize their performances. This Special Issue welcomes original contributions from different disciplines dealing with methodological improvements and applications for impact assessment and governance of sustainable soil management. Contributions may include: Farmers' and other stakeholders' perceptions on soil management, metrics and indicators for assessing resource efficiency of soil management, relations between soil functions and ecosystem services, opportunities and risks of soil management technologies, spill-over effects, ethical considerations of sustainable soil management, as well as governance, policy and institutional analyses.

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Geography, Planning and Development)
