Mons, Belgium

### Message from the Collection Editors

This Topical Collection will focus on urban energy management and sustainable transportation systems, with emphasis on bottom-up approaches that consider local renewable sources and storage systems in a flexible micro-grid environment, under the presence or absence of smart mobility, applied in different buildings that as a whole have the characteristic to be identified as Net-Zero Energy Buildings. The new methods of modeling and systems characterization will be further lifted to a larger scale consisting of multiple buildings under an urban scenario where different forms of transportation interact and communicate with the integrated system, thus creating the so-called Multi-level System-of-Systems approach (MLSoS).

Applied Science, University of  
Ontario Institute of Technology,  
Oshawa, ON L1G 0C5, Canada

## Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Geography, Planning and Development)
