Message from the Guest Editors

A significant proportion of the world population faces fresh water shortages to various degrees. It has become a pressing issue around the globe to utilize water resources in a sustainable manner to achieve green growth of economy and society. As one of the most fundamental and indispensable resources on this planet, water plays an important role in provision of various products and services to human society. In fact, human needs can be satisfied without sacrificing the long-term availability of water resources, as long as water is utilized efficiently and closed (31 January 2020) managed responsibly. This Special Issue aims to address these challenges from a host of angles surrounding water resources and the environment. We welcome theoretical and applied contributions to the general theme of water resources and green growth.

> Specific topics include, but are not limited to: climate change impacts on water resources; conflict resolution and decision-making; coupled socio-economic and biophysical modeling; low-carbon economy development; resources and environmental green development; risk management of water-related disasters; smart water services; trade and environmental issues; water rights management.
