Message from the Guest Editor

The decline in water quality and the tightened wastewater discharge standards are posing a considerable challenge in the current global water industry. Thus, innovative technologies are urgently needed for wastewater and sewage-sludge treatment to ensure environmental and economic sustainability. The improvement of collecting and treatment systems for wastewater is increasing annual sludge production, further increasing the problem of sewage-sludge disposal. Sewage-sludge disposal routes should be established according to the circular economy concept to promote sustainable recovery pathways and to overcome the barriers that are now limiting material and energy recovery from sewage sludge.

This Special Issue aims to provide a platform for researchers for disseminating recent technological developments and engineering solutions in the areas of wastewater treatment and sewage-sludge management. Within this context, we would like to invite you to submit original research and review articles to disseminate and share new findings on wastewater treatment and/or sewage-sludge management.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Geography, Planning and Development)
