Message from the Guest Editors

Sustainable buildings are designed to help to reduce the overall impact on the environment and human health along their lifecycle. This is accomplished by preserving and protecting the natural resources that surround the project site, reducing waste, pollution, and degradation of the environment when the building is under construction, using energy, water, and other resources in an efficient way, and protecting the health of residents. In particular, as one of the most important challenges to improving sustainability and to tackling climate change at global level is the reduction of greenhouse gases (GHG) emissions, and given the important role that the building sector will have to play in any low-carbon transformation, this Special Issue aims to attract works of scientific interest to deepen our understanding of these fields with different approaches.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer-reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access:— free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High visibility: indexed within [Scopus](#), [SCIE](#) and [SSCI \(Web of Science\)](#), [GEOBASE](#), [Inspec](#), [AGRIS](#), [RePEc](#), [CAPlus / SciFinder](#), and many [other databases](#).

Journal Rank: [JCR](#) - Q2 (*Environmental Sciences*) / [CiteScore](#) - Q1 (*Geography, Planning and Development*)
