**31 October 2021**

### Message from the Guest Editors

Air pollution brings serious health and quality of life implications and it poses one of the greatest environmental risks for human health, as well as for all living beings and our planet's sustainability. It can potentially cause numerous respiratory illnesses, such as asthma, chronic obstructive pulmonary disease, allergies, lung cancer, as well as cardiac issues. Air quality monitoring systems are essential to help us to maintain a good quality of life and, since the overall population spends approximately 90% of their time inside buildings, monitoring air quality in indoor environments is crucial. Additionally, indoor pollution levels can be 2–5 times higher than in outdoor environments, according to the United States Environmental Protection Agency (EPA). To address indoor air quality and its underlying effects on human health more effectively, the use of artificial intelligence, as well as efficient and smart communication techniques, are essential to accomplish this task in an efficient, unobtrusive, and seamless way.

## Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer-reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

## Author Benefits

**Open Access:**— free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High visibility:** indexed within [Scopus](#), [SCIE](#) and [SSCI \(Web of Science\)](#), [GEOBASE](#), [Inspec](#), [AGRIS](#), [RePEc](#), [CAPlus / SciFinder](#), and many [other databases](#).

**Journal Rank:** [JCR](#) - Q2 (*Environmental Sciences*) / [CiteScore](#) - Q1 (*Geography, Planning and Development*)
