### Message from the Guest Editors

Building design processes and the level of commitment to sustainable principles are influenced by numerous factors related to the market, local regulations, and the general culture of the industry. Pushing all these influential factors toward achieving accelerated changes in industry and people's mindset and lifestyle with a view to drastically reducing greenhouse gasses emissions is not only a challenge but an obligation.

This Special Issue calls for papers which reflect upon advances in building design processes leading to sustainable architecture in its broad sense. Papers covering not only drivers, but also threats and obstacles to implementing proven theoretical and practical design methods, are welcomed.

## Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer-reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
