### **Message from the Guest Editor**

Dear Colleagues,

Collaborations that extends across academic disciplines and into professions and the organized general public are widely recognized as essential to produce the knowledge and innovation required to address sustainability challenges. However, the best way to organize and conduct such collaborations is not well understood, particularly as differences exist in epistemic cultures, professional practices, political interests, social backgrounds, sustainability challenges, and a lot of other work against effective collaboration. For this Special Issue, we invite papers that analyze the organization and dynamics of sustainability collaborations and that propose new patterns of collaboration to achieve sustainability goals. We encourage papers of every sort to address cultural differences, power dynamics, social justice, and equity.

- collaboration
- transdisciplinarity
- interdisciplinarity
- comparative analysis
- public engagement
- justice
- equity
