### Message from the Guest Editor

Given the importance of lighting in our everyday lives, the extent and the multifaceted nature of light-related issues in the built environment, consistent and multidisciplinary discussions are rather necessary among lighting designers, policy makers, health industry, computer scientists, electrical engineers, and so forth. To that end, this Special Issue, “Design of Architectural Sustainable Lighting”, provides a platform for exchange of knowledge and current status of the design, research, development, engineering experiences, and law regarding sustainable light and lighting issues, covering visual, environmental, social, and economic dimensions and requires a multidisciplinary approach in order to advance in these and related areas.
