### Message from the Guest Editors

As the world confronts immense challenges from the coronavirus disease 2019 (COVID-19) pandemic, societies all around the globe are dealing with dramatic changes in people's daily life. In the business world as well, the COVID-19 crisis has created unexpected challenges for customers, businesses, and policymakers. Hence, understanding COVID-19's effects on the sustainable development (i.e., continuous transformation) of enterprises and industries is vital. Against such a backdrop, information technology and intelligence applications are responsible for the recent "digital transformation" that is frequently used to signify the influence of an array of technologies on social functions and business activities.
