Message from the Guest Editor

This Special Issue consists of articles that investigate and discuss the relationship between economics of education and sustainable development. That is, how education economics plays an important role in sustainable development. Economics of education or education economics is the study of economic issue relating to education while sustainable development is the study a system operating and growing continuously, which includes environment, economy, industry, business, agriculture, etc. This special issue particularly focuses on the economy—how an economy continuously and steadily develops and grows. One of the key factors attributes to a country's economic development and growth is human capital or education. When the percentage of educated workers in a country significantly increases, the country's economy will become stronger, implying more productive and competitive. This is because educated workers can more efficiently implement tasks that requires literacy, critical thinking, and technological skills, and hence improves a country's productivity and competitive advantages.
