### Message from the Guest Editors

As well known, the building sector is one of the most energy consuming sectors in developed countries. It accounts for 40% of the total energy consumption of the EU member states and 36% of their CO<sub>2</sub> emissions. Furthermore, about 35% of buildings in EU are over 50 years old.

To achieve the international targets on the limitation of CO<sub>2</sub> emissions, new solutions and strategies should be implemented. In literature, residential buildings are usually considered as case study, because their large spreading on the territory and consequently the required energy demand.

In this issue, the attention is focused on non-residential buildings or large buildings, because they are usually characterized by a high and more regular energy demand. Consequently, each retrofit solution can potentially produce high benefits for the environment.

## Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

## Author Benefits

**Open Access:** free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High Visibility:** indexed within [Scopus](#), [SCIE](#) and [SSCI \(Web of Science\)](#), [GEOBASE](#), [GeoRef](#), [Inspec](#), [RePEc](#), [CAPlus / SciFinder](#), and [other databases](#).

**Journal Rank:** JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
