### Message from the Guest Editors

Foresight research is gaining importance, and is understood as a future-oriented managerial competence, a company's capability or as a systematic, participatory process focused on gathering knowledge about future-oriented vision-building and its impact on today's decisions and mobilizing joint actions, faced with the unpredictability of the environment.

This Special Issue covers a diverse range of substantive theoretical and methodological developments in the field of foresight studies. The Issue is addressed to original research related to the recent developments of Industry 4.0 and its positive and negative futures, strategic foresight at the company, regional, and city levels, as well as strategic planning and its links with sustainability. The problems of integrating foresight with innovation process management, technology assessment, and organizational capabilities evaluation are also within the scope of interest.
