Message from the Guest Editors

The rapid development of techniques such as connected and autonomous vehicles (CAV), digital twins, and virtual reality has substantially shaped our cities. Despite their potential use toward a more efficient and sustainable transportation system, the associated challenges to road safety have not been fully validated and remain under investigation.

This Special Issue therefore focuses on the frontiers in road safety research in the era of emerging technologies and data. Specifically, it aims to invite stakeholders from all levels, including urban planners, traffic engineers, environmentalists, epidemiologists, behavioral psychologists, ergonomists, and policymakers to envisage, discuss, untangle, and define the role played by advanced technologies and big data in road safety and to develop cutting-edge and technically sound methods to achieve a safer, smarter, and more intelligent transportation system.

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE](#) and [SSCI \(Web of Science\)](#), [GEOBASE](#), [GeoRef](#), [Inspec](#), [RePEc](#), [CAPlus / SciFinder](#), and [other databases](#).

Journal Rank: JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
