Message from the Guest Editors

In the context of climate change, space syntax allows for an understanding how spatial parameters can encourage or limit sustainable urban transformation and sustainable mobility means. This is extended by the investigation on the connection between the sustainable city debate and existing space syntax theories to build knowledge on the relationship between space and society. The challenge is that sustainable development concerns both normative and descriptive issues, and here, we are dealing with present as well as future needs. In order to predict future needs, a descriptive approach is needed from a present context. The aim of this Special Issue is to bring together state-of-the art knowledge and innovation connecting space syntax with the sustainable city debate.

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE](#) and [SSCI \(Web of Science\)](#), [GEOBASE](#), [GeoRef](#), [Inspec](#), [RePEc](#), [CAPlus / SciFinder](#), and [other databases](#).

Journal Rank: JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
