Message from the Guest Editors

The demand of energy in industries is also increasing as a result of the smart production system. The energy supply should be properly maintained for industries and for our daily life. To do so, it is necessary to take care of the source of energy, supply of raw material, production power plants, logistics, and other factors. These can all be maintained properly through energy supply chain management. Smart production systems and automation policies can be used in the production system. Different strategies can be used depending on the power of the supply chain players. Pricing strategy, discount policy, or reward policy are useful business strategies for different energy distributor companies.

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer-reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access:— free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High visibility: indexed within [Scopus](#), [SCIE](#) and [SSCI \(Web of Science\)](#), [GEOBASE](#), [Inspec](#), [AGRIS](#), [RePEc](#), [CAPlus / SciFinder](#), and many [other databases](#).

Journal Rank: [JCR](#) - Q2 (*Environmental Sciences*) / [CiteScore](#) - Q1 (*Geography, Planning and Development*)
