Deadline for manuscript submissions:
closed (31 May 2021)

Message from the Guest Editor

This Special Issue comprises selected papers related to synthesis methods with green chemistry aspect. We have several fundamental problems to be resolved, such as global warming and plastic exposure, so it is evident that we need improved and more energy-efficient and environmentally friendly methods to prepare chemical compounds even if they are prepared on a small scale, according to the motto “great oaks from little acorns grow”. In recent decades, environmental issues have become more and more important questions to be tackled by industrial synthetic chemistry. The need to reduce the production of waste and the use of hazardous and toxic substances have stimulated a new way of thinking, called green chemistry. Green chemistry focuses on the design of processes that minimize and/or eliminate the use and the generation of those hazardous and toxic substances while producing more environmentally friendly products.

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.
High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.
Journal Rank: JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
