### Message from the Guest Editors

Urban and regional accessibility is an important feature of many aspects of quality of life, as well as the economic growth of both urban districts and more rural regions. Accessibility generally substantially improved over the last century due to the increased presence of privately owned vehicles, investments in mass transit and public transportation systems, and due to the more informed planning of public facilities. However, the relationships among accessibility, regional growth, and quality of life are complex, especially in terms of causal relationships, rendering policy for mobility, accessibility, and land-use planning a highly interesting and challenging area of research. This situation becomes even more complex when considering environmental and social sustainability, as conflicting goals between sustainability dimensions often occur, and there are limited resources for investments in and restructuring accessibility infrastructures.

## Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
