Thermal Management in Energy Systems

Guest Editor:

Prof. Dr. Fatih Selimefendigil

Department of Mechanical Engineering, Manisa Celal Bayar University, Manisa 45140, Turkey

Deadline for manuscript submissions: closed (30 April 2022)

Message from the Guest Editor

Thermal management in energy provides systems performance enhancement and reliable operating conditions during the lifespan of energy-related products, for which many applications are possible in diverse systems, including photovoltaic panels, hydrogen storage, lithium-ion battery systems, thermal energy storage, and micro-electro-mechanical systems (MEMs) in addition to numerous convective heat transfer applications. Active, passive, and hybrid methods have been considered for thermal management in renewable and nonrenewable energy systems. In one of the available methods, nanosized particles are used in heat transfer fluids, and this nanofluid technology has been successfully implemented for thermal management of diverse energy systems, including solar power, thermoelectric power generation, refrigeration, jet impingement heat transfer, and electronic cooling applications.

The present Special Issue will focus on the application of various thermal management methods in diverse energy systems and present the most recent methods and advanced simulation tools. It is envisaged that this Special Issue will serve as an invaluable reference for researchers and engineers.

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international Open Access journal which provides an advanced forum for research findings in areas sustainability related to and sustainable development. Sustainability publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions. **High Visibility:** indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (*Geography, Planning and Development*)
