

## Special Issue

# Sustainable Management and Digital Transformation for Logistics, Supply Chain, and Procurement

### Message from the Guest Editor

The convergence of sustainability and digital transformation is reshaping logistics, supply chain, and procurement, presenting unprecedented opportunities and challenges for businesses and policymakers alike. As global supply chains face mounting pressure to reduce their environmental impacts while maintaining efficiency, digital technologies—such as artificial intelligence, blockchain, the Internet of Things (IoT), and big data analytics—are emerging as critical enablers of sustainable practices. We invite cutting-edge research that examines the integration of green logistics, circular economy principles, and low-carbon procurement strategies with digital tools, addressing key questions such as the following: How can digitalization enhance transparency and resilience in sustainable supply chains? What are the risks and opportunities of deploying smart technologies for ethical sourcing and waste reduction? By fostering interdisciplinary dialog, this Special Issue aims to contribute to the development of agile, responsible, and future-ready supply chain frameworks that align with the United Nations SDGs.

## About the Journal

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
