# **Special Issue**

# Sustainable Cities and Global Climate Change

# Message from the Guest Editor

Urbanization has profoundly affected the environment and global climate. Cities are major contributors to climate change; they are home to more than half of the world's population and responsible for about 70% of alobal greenhouse gas emissions. Moreover, cities are already heavily affected by climate change. Because of unusually hot summer days and nights, urban residents face more heat illnesses, power outages, and higher energy prices. Cities can, therefore, play a crucial role in both mitigating climate change and protecting people from its impacts. This Special Issue aims to investigate the crucial role of urbanization and cities, in particular, in combating climate change and its impacts. In this Special Issue, original research articles and reviews are welcome, including contributions from disciplines such as energy economics, climate economics, sustainability health economics, and regional and urban planning. I look forward to receiving your contributions.

# **About the Journal**

# Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
