Special Issue

Moving Forward to the Paris Agreement Warming Targets

Message from the Guest Editors

By beginning of 2022, there were more than 130 countries committed to achieving carbon neutrality by 2050, or before 2060. This gave a significant move to realize the objective of UNFCCC after decades of talk on mitigation. Based on the IEA's assessment by beginning of 2022, it is hopeful that warming of 1.8 °C will be achieved by 2100, which means that part of the Paris Agreement targets would be reached. Therefore, there is a strong need to research society in a way that will provide more detailed analyses of the energy and economic transition toward to the warming targets and will implement the actions to achieve these commitments that countries have made. This Special Issue invites research papers on policy road map assessment, zero-carbon technology development. international collaboration, the implementation on Article 6 of the PA, and stock-taking of related measures, to support the near-term decision making on implementing these commitments. It is expected that papers from this Special Issue will contribute to nearterm policies and action regimes, international collaborations, and the implementation of the PA's articles.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario Institute of Technology, Oshawa, ON L1G OC5, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
