Special Issue

Resource Management and Circular Economy Sustainability

Message from the Guest Editors

The growth of the human population and the urgent need for a global sustainable transition to a greener energy grid system have led to an increase in the demand for raw materials. Furthermore, the production of waste due to this increase in the population and the need to satisfy the requirements of a technological society has grown considerably in recent years. The efficient management of both resources and waste has made it indispensable to achieve the sustainability goals required by a circular economy. Recycling is one way of reducing the demand for primary raw materials, but the increasing dilution of technological metals in consumer products has made the development of efficient and economic processes a major challenge. On the other hand, the continuous shortening of life cycles of different consumer products has increased the demand for these primary raw materials.

Research areas may include (but are not limited to) the following:

Water resource management; Resource and waste management; Sustainability by design;

Process development for the recovery of critical raw materials.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University, Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
