

Special Issue

Agricultural Economics, Policies, and Sustainable Rural Development

Message from the Guest Editors

Rural areas play a key role in the sustainable development of Poland, occupying more than 90% of the country's land area. They are the main locations where agriculture and other activities take place. Rural areas are characterized by uneven distribution of natural resources, size of human resources, variations in population density, quality of human capital and technical infrastructure, soil fertility, climate, communication accessibility, state of the environment, climate for conducting business activities, standard of living, etc. Sustainable development should therefore be implemented at all levels of governance (international, national, regional, and local). In local territorial systems, a sustainable development strategy is a useful tool for putting these principles into practice. The Special Issue aims to analyze agricultural economics, policies, and sustainable rural development. Contributions addressing the following topics are particularly encouraged:

- Rural development;
- Agricultural economics;
- Renewable energy sources;
- Sustainable development of rural and non-rural areas;
- Sustainability issues of agriculture.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
