

Special Issue

Recent Trends in Applications of Computer Vision in the Development of a Sustainable Environment

Message from the Guest Editors

The key feature of this Special Issue is to incorporate various profound technical aspects of computer vision for the achievement of sustainable development. Computer vision uses a camera and computer instead of the human eye to identify, track, and measure targets for further image processing, with the emergence of artificial intelligence having great potential for seeing, classifying, and processing visual data. The evolution of computer vision dramatically impacts the environment, society, and economy, and is considered a core sustainability issue. This also highlights the functionality and importance of green data, IoT, and blockchain in computer vision. This Special Issue aims to attract many eminent scholars, researchers, and scientists to work in a field of such high interest, integrating different technologies, such as blockchain, IoT, big data, cloud computing, deep learning, machine learning, and smart grid for this computer-vision-assisted sustainable development. Dr. Nawab Muhammad Faseeh Qureshi

Guest Editors

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario
Institute of Technology, Oshawa, ON L1G 0C5, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
