Special Issue

Path to Carbon Neutrality

Message from the Guest Editors

Carbon neutrality, defined as a state of net-zero carbon dioxide emissions, has been identified by the United Nations as a goal to be achieved by several actors around the world to maintain a high quality of life for humanity while staying within planetary boundaries. To do so, many of these actors within several economic sectors have been performing activities aligned with public policies to achieve carbon neutrality by 2050. For instance, governments, organizations, universities, and companies are being engaged nowadays with the commitment to tackle challenges derived from climate change because this has become a differentiating value that transcends their organizational missions. This Special Issue invites reports on the achievements that define paths toward Carbon Neutrality, including efforts conducted among the different dimensions of Sustainability: environmental, economic, and social.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
