

Special Issue

Sustainability of Smart Building: The Intelligence Application, Industry 4.0, BIM, Environmental Comfort, and Safety Application

Message from the Guest Editors

This Special Issue titled 'Sustainability of Smart Building: The Intelligence Application, Industry 4.0, BIM, Environmental Comfort, and Safety Application,' is timely and tailored towards addressing a crucial part of socio-economic development, especially for developing countries' construction sustainability and digitalisation. This Special Issue will offer a significant platform for researchers to share their solutions to the age-long problems of the construction industry, particularly in developing countries. This is because research shows that when construction organisations transform from a traditional service delivery approach to a more digitalised approach, significant improvements in project delivery and better competitive advantage for these organisations are inevitable. This can be achieved through knowledge sharing via research publications. This Special Issue welcomes research papers in related fields that are tailored towards construction sustainability and digitalisation to improve the transformation quest and deliver a more sustainable environment.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
