Circularity Approach to Solving Resource and Climate Problems

Message from the Guest Editors

The world is facing climate change, a shortage of natural resources, and other environmental and socioeconomic problems which are caused by unsustainable production and consumption. By applying a circular approach to our current production and consumption habits, a healthier environment and more sustainable society and economy can be achieved. Circular approaches are applicable to the whole supply chain, from resource extraction, production, and use to the end of the use of the product. This approach maintains the product's value for as long as possible to minimize waste and pollution and to improve the value of the resources used. It not only brings direct economic benefits to businesses, but also has positive impacts on society through job creation and improving the working environment, consequently targeting all three pillars of sustainability. This Special Issue aims to present a collection on the application of circular approaches, in theory and in practice, for a more sustainable world.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario
