

## Special Issue

# Corporate Sustainability: Enhancing Supply Chain Resilience and Environmental Performance

### Message from the Guest Editors

Corporate sustainability and supply chain resilience have become extremely relevant in today's business landscape because of rising supply chain complexities and the heightened probability of disruptions. Organizations, therefore, acknowledge the significance of understanding and incorporating sustainable strategies into their business operations. This Special Issue seeks to address the issues of balancing economic objectives with environmental and social responsibility, examining the relationship between supply chain resilience and environmental performance. Amid continual interests in sustainable operations that ensure the reliable delivery of goods and services with minimal ecological footprints, this Special Issue will incorporate environmental performance, risk management, and corporate sustainability theories to identify the practical implications of resilient supply chain operations. We invite high-quality original research and review articles presenting conceptual models, theories, methodologies, and findings that explore how supply chain resilience contributes to environmental performance and sustainable business practices.

# About the Journal

## Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
